

Medical Device Sourcing

Taiwan

Brochure

Locating medical device suppliers and understanding their business activities and capabilities can be a time-consuming endeavor. The rise of rapidly growing economies, particularly in Asia and South America are changing the landscape of the medical device industry. Devices receiving marketing authorization from the U.S. FDA are increasingly being manufactured outside of North America. Understanding the global medical device supply chain and the supplier relationships that drive this industry segment is an important success factor in the new product development decision process.

There are 670 medical device companies located in Taiwan and listed in the US FDA Establishment Registration and Device Listing for 2020. This publication categorizes them based upon their industry activities, device applications and service offerings. This publication includes 168 pages of information on this important market segment.
